The Ten Best Reasons to Buy a Recon

Sept 2005

- 1. Ultra-rugged** - There simply is not a tougher handheld out there. The Recon™ meets stringent military standards (MIL-STD-810F) for drops, and it operates in temperature extremes from -22 to 140 °F (-30 to 60 C). It's also fully weatherproof, with an IP67 rating, making it impervious to water and dust. You can work in the rain, drop the Recon in the mud, or keep working in very hot or cold temperatures. The sturdy Recon won't back down from the environmental challenge!
- 2. Long-life battery** - You need a data collector that gives you a full day's work. The Recon provides 15 hours of operation with the standard rechargeable NiMH battery, or up to 16 hours with the optional AA battery boot. The Recon comes with a powerful and proven X scale processor for optimal speed and battery conservation.
- 3. Versatility** - Two separate CompactFlash slots let you add memory, barcode, wireless communication, GPS and more. They give you various options for collecting and transferring your data. And an optional Extended CF-Cap will keep larger cards protected to the same rugged standards. All Recons come with both serial and USB ports, two stylus pens, a back hand strap and ten screen protectors as standard equipment.
- 4. GOOD value** - For the price, the Recon is a great value for being such a rugged data collector. It's a very reliable handheld - a tool manufactured with the latest technology. Evaluate the features and durability, and you'll choose the Recon!
- 5. Linux Mobile** - Using the most robust and stable operating system available means the Recon will always be ready to do the HEAVY LIFTING that cannot be accomplished with consumer grade operating systems. Full featured applications that drive business processes and deliver real ROI are now a proven reality.
- 6. Sunlight-readable display** - The TDS Recon has a bright and clear color touch screen with a front light. You can work with the Recon outdoors on the sunniest day and still easily see what's on the screen.
- 7. Lightweight** - At just 17 ounces, the Recon is easy to operate all day long. It's comfortable in the hand, and ergonomically designed for all-day use.
- 8. Data security** - The Recon has plenty of nonvolatile Flash Storage to keep your data secure even if there is an unexpected power loss.
- 9. Proven** - Users and reviewers agree that this is one rugged and powerful data collector. The extraordinary Recon has proved itself in the field by people just like you who put it to the test every day.
- 10. Warranty** - All Recons are guaranteed. Even when the one-year warranty expires, we offer second & third year extended service options.
